Chennai

SUMMARY

I build backend systems in Java and Spring Boot and care about keeping them boring in production. Six years, mostly on supply chain and invoicing software.

EXPERIENCE

Senior Software Engineer, Kaveri Digital, Chennai — Oct 2022 – Present

- Split the order, inventory, pricing and shipping features into separate Spring Boot applications, each deployed on its own and each with its own database, talking to each other over REST and RabbitMQ.
- Added a gateway in front of them that handles authentication and rate limits for all callers.
- Set up distributed tracing so a slow order can be followed across the four applications in one view.
- Brought down failed shipments from 3.1% to 0.8% by making the retry logic safe to repeat.

Software Engineer, Saffron Soft, Chennai — Nov 2020 – Oct 2022

- Built invoice and credit note APIs with Spring Boot and JPA.
- Wrote the integration tests that the team still runs before every release.

EDUCATION

- B.E., Computer Science, PSG College of Technology, Coimbatore, 2020 (8.6 CGPA)

SKILLS

Java 17 / Spring Boot / Spring Data JPA / Spring Cloud Gateway / RabbitMQ / PostgreSQL / REST / Docker / OpenTelemetry / Gradle
